

grant writing strategies

making active learning a reality for you

The needs of today's students are changing, and many schools are reconsidering how pedagogy, technology and space can be integrated for a greater impact on teaching and learning. Often, the cost for schools to adapt and evolve requires outside funding—primarily, grants.

The task of writing a grant can seem daunting, but being equipped with the right skills can not only prevent out-of-pocket expenses for educators, but also earn funds to improve the quality of learning for students.

Please join us for an interactive four-hour seminar that will create a roadmap for educators to find suitable grants that will benefit their students and classrooms.

In this seminar, participants will engage with fellow educators and experts from Polymath, LLC—an organization dedicated to training teachers and bring clarity to the grant-writing process. Attendees will be provided with state-specific grant writing tips and hands-on practice, all within the context of an active learning environment.

Attendees will return to their respective learning institutes with knowledge, skills, resources, confidence and the first step of a complete grant application—a letter of interest for a specific grant of their choice.

POLYMATH LLC

Polymath's consultants are experts at grant management and implementation, collectively possessing more than 60 years of experience, so it's no surprise that the organization has written over 50 successful grant proposals representing more than \$110 million in external funding in the past 15 years. With a mission to increase the knowledge and enhance the skills of educators, Polymath is able to provide high-quality training, technical assistance, and other services across the United States. For more information about Polymath, visit their website at <http://www.polymathllc.org/>
